

IN THE CLAIMS

1. (Original) A method of creating a web-page of a web-site, the method including:

providing a user with a plurality of different modules from which the user can select;

enabling the user to select desired modules from the plurality of different modules;

providing the user with means to populate each selected module with desired information ;

enabling the user to cause the selected modules to be displayed on a digital display surface in a populated condition, in which each module is populated with the desired information, and in which the modules are displayed in a vertically stacked fashion one immediately adjacent another.
2. (Original) The method of creating a web-page of a web-site as claimed in claim 1, in which each module is arranged to extend horizontally across at least a major portion of the digital display surface.
3. (Presently Amended) The method of creating a web-page of a web-site as claimed in ~~claim 1~~ or claim 2, in which the digital display surface defines rows of pixels and the modules are arranged to be displayed such that at least part of only one module is displayed on any one row of pixels.
4. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim 3 ~~any one of the preceding claims~~, in which each module has a width selected from the group consisting of 720 pixels and 100%.
5. (Cancelled)
6. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim ~~5~~ 1, in which each module has a width of 720 pixels.

7. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim 1 ~~any one of the preceding claims~~, in which providing a user with a plurality of modules from which the user can select includes providing the user with a module selection page which indicates a plurality of different modules which can be selected.
8. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim 7, in which providing the user with a module selection page which indicates a plurality of different modules which can be selected includes causing a graphical representation of each of the plurality of different modules to be displayed on the module selection page.
9. (Presently Amended) The method of creating a web-page of a web-site as claimed in ~~claim 7~~ or claim 8, in which providing the user with a module selection page which indicates a plurality of different modules which can be selected includes causing a description of each of the plurality of different modules to be displayed on the module selection page.
10. (Cancelled)
11. (Presently Amended) The method of creating a web-page of a web-site as claimed in ~~any one of claims 1 to 6 inclusive~~, in which providing a user with a plurality of different modules from which the user can select includes providing the user with a module type page, which displays a plurality of different module types from which the user can select, and providing the user with a module selection page, which indicates a plurality of different modules of a module type which can be selected, in response to the user selecting a module type on the module types page.
12. (Cancelled)
13. (Cancelled)
14. (Cancelled)
15. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim 1 ~~any one of the preceding claims~~, in which providing the user with means to populate each

selected module with desired information includes providing the user with an information input page.

16. (Presently Amended) The method of creating a web-page of a web-site as claimed in claim 1 ~~any one of the preceding claims~~, in which the plurality of different modules from which the user can select is stored in a module database at a remote web-site, providing a user with a plurality of different modules from which the user can select then including permitting the user to access the module database at the remote web-site.

17. (Original) A system for enabling a user to create a web-page of a web-site, the system including:

a database on which a plurality of different modules is stored;

selection means arranged to enable a user to select modules from the database;

population means arranged to enable the user to populate the selected modules with desired information; and

display means arranged to cause the selected modules to be displayed on a digital display surface in a populated condition, in which each module is populated with the desired information, and in which the modules are displayed in a vertically stacked fashion one immediately adjacent another.

18. (Presently Amended) The system for enabling a user to create a web-page of a web-site as claimed in claim 17, in which each of the different modules is arranged to extend horizontally across at least a major portion of the digital display surface.

19. (Presently Amended) The system for enabling a user to create a web-page of a web-site as claimed in ~~claim 17~~ or claim 18, in which the digital display surface defines rows of pixels and the modules are arranged to be displayed such that at least part of only one module is displayed on any one row of pixels.

20. (Cancelled)
21. (Cancelled)
22. (Presently Amended) The system for enabling a user to create a web-page of a web-site as claimed in claim 19 ~~21~~, in which each module has a width of 720 pixels.
23. (Cancelled)
24. (Cancelled)
25. (Cancelled)
26. (Cancelled)
27. (Presently Amended) The system for enabling a user to create a web-page of a web-site as claimed in claim ~~any one of claims 17 to 22 inclusive~~, in which the selection means includes a module type page, arranged to display a plurality of different module types from which the user can select, and a module selection page, which indicates a plurality of different modules of a module type which can be selected, in response to the user selecting a module type on the module types page.
28. (Presently Amended) The system for enabling a user to create a web-page of a web-site as claimed in claim 27, in which the module selection page includes a graphical representation of each of the plurality of different modules.
29. (Cancelled)
30. (Cancelled)
31. (Cancelled)
32. (Cancelled)

33. (Original) A web-site arranged to generate a web-page, the web-site including:

a plurality of different modules stored on a database;

information stored on a database, which information is arranged to populate the modules; and

display means arranged to cause the modules to be displayed on a digital display surface in a populated condition, in which each module is populated with information, and in a vertically stacked fashion one immediately adjacent another.

34. (Presently Amended) The web-site arranged to generate a web-page as claimed in claim 33, in which each module is arranged to be displayed to extend horizontally across at least a major portion of the digital display surface.

35. (Cancelled)

36. (Presently Amended) The web-site arranged to generate a web-page as claimed in claim ~~any one of claims 33 to 35 inclusive~~, in which each module has a width selected from the group consisting of 720 pixels and 100%.

37-81. (Cancelled).
